

EZ26 SERIES

THRU-THE-WALL/BUILT-IN AIR CONDITIONERS

PRODUCT INFORMATION

Available two-stage electric heat for energy savings!!

Highest Efficiency

- In real-world conditions, the modulating inverter chassis means inefficient start/stop of the compressor is eliminated.

Incredibly Quiet

- Inverter compressor, condenser fan and evaporator fan slow to match cooling and heating demand of room, reducing operating sound levels.
- Elimination of compressor start/stop means the room is much quieter in part-load conditions

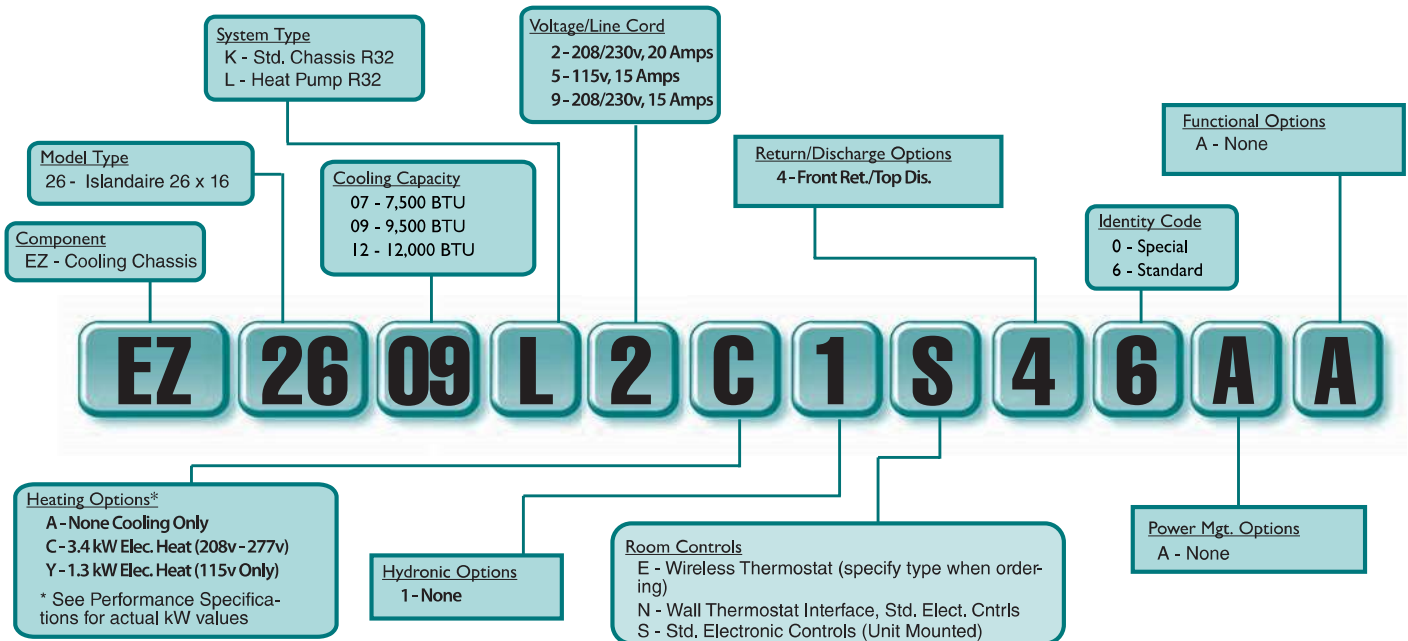

Consistent Dehumidification

- Modulating inverter technology ensures a cold condensing evaporator coil in part-load to keep comfortable humidity levels, eliminating clamminess in humid conditions.

The EZ26 Series Inverter Heat Pump incorporates state-of-the-art inverter technology, and are designed and manufactured for new construction or the replacement of 26" packaged terminal air conditioning units (Amana PB Series 26" unit, the GE AJ Series 26" unit, the Friedrich 27" Wallmaster unit* and the Fedders 27" unit*) in an existing building. The technology is the culmination of years of research to develop a PTAC to clearly lead the market with the low energy consumption and low sound levels. Dramatic energy savings and sound reduction is achieved by modulating the output of the PTAC to match the cooling or heating demands of the room, eliminating costly and noisy compressor cycling. This product is designed for individually-zoned, comfort-controlled heating and cooling. Standard warranty is a one year parts and labor including five year sealed system part only warranty or a two year parts only including a five year sealed system part only warranty.

EZ26 SERIES

THRU-THE-WALL/BUILT-IN AIR CONDITIONERS

PRODUCT INFORMATION

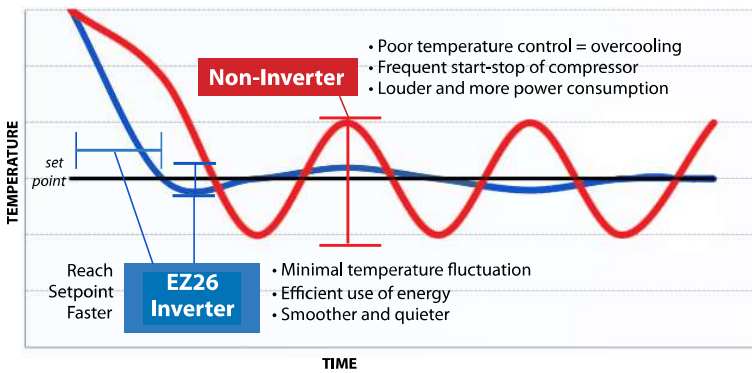

EZ26 Inverter: The Benefits of Inverter Technology

The EZ Series 26 Inverter Heatpump incorporates state-of-the-art inverter technology not found in any other PTAC, yet it fits into standard 26" x 16" PTAC wall sleeves. The technology is the culmination of years of research to develop a PTAC to clearly lead the market with the lowest energy consumption, most consistent dehumidification, best conditioned air and the lowest sound levels.

Although published EER's will be similar to other PTACs, based on laboratory testing simulating real-world installations, up to a 30% reduction in energy consumption can be expected with the Islandaire EZ26 Series PTAC when compared to other PTACs! Dramatic energy savings and sound reduction is achieved by modulating the output of the PTAC to match the cooling or heating demands of the room, eliminating costly and noisy compressor cycling.

Non-Inverter PTACS
Run the compressor at full RPM or zero RPM (on or off). The on/off compressor cycling in part-load conditions wastes substantial amounts of electric power.

EZ26 Inverter PTACS
Slow the compressor RPM to match the part-load cooling or heating power required. A substantial reduction in power consumption occurs
